MADI CEESAY

FULL-STACK SOFTWARE ENGINEER | BACKEND-FOCUSED

The Gambia | cmadi3762@gmail.com | +220 3737962 / +220 7829264 | github.com/MadiCeesay
linkedin.com/in/madi-ceesay-857351372

PROFESSIONAL PROFILE

Final-year Computer Science student at the University of The Gambia building full-stack web and mobile applications with a strong interest in backend engineering. Experienced with React, Node.js/Express, MongoDB, Java/Spring Boot, REST APIs, authentication, database design, testing, and deployment. Developed practical platforms for property listings, local services, blood donor coordination, and flood reporting; contributed to a hackathon team that earned 2nd Runner-Up.

TECHNICAL SKILLS

Languages: JavaScript, Java, Python, SQL, HTML, CSS

Backend & APIs: Node.js, Express.js, Spring Boot, Flask, REST APIs, JWT, role-based access control

Frontend & Mobile: React, React Native/Expo, Tailwind CSS, Redux Toolkit, Vite, Axios

Data & Infrastructure: MongoDB, PostgreSQL, MySQL, Docker, Docker Compose, Git/GitHub, Render, Vercel, Cloudinary

Engineering: API design, authentication, unit testing, JUnit/Mockito, Postman, concurrency, OOP

SELECTED PROJECTS

AMC Gambia | Real Estate Platform

React, Node.js, Express, MongoDB, JWT, Cloudinary | amc-gambia.vercel.app

- Built a full-stack property platform with listing search and filters, multiple-image uploads, user authentication, and role-based dashboards.
- Developed APIs and workflows for property management, approvals, favorites, and viewing requests.

FinCore | Micro-Banking Backend

Java 17, Spring Boot 3, PostgreSQL, Docker Compose, Python/Flask | *Course project*

- Designed layered REST services for customers, accounts, and transactions, including atomic fund transfers using @Transactional.
- Implemented producer-consumer concurrent processing, structured API error handling, and a Flask analytics integration; tested with JUnit/Mockito and concurrent tasks.

FloodWatch Gambia | Community Flood Reporting

Full-stack web application | floodwatch-gambia.vercel.app | ITCA Hackathon

- Collaborated with Team Beyond Syntax to build a citizen flood-reporting platform with administrator review and verification workflows.
- Earned 2nd Runner-Up at the ITCA Hackathon as part of the team.

SkillLink | Local Services Marketplace

Node.js, Express, MongoDB, React, Socket.IO | *In development*

- Developing a marketplace connecting customers with local service professionals through job requests, quotes, direct hiring, and messaging.
- Implemented backend workflows for service requests and real-time communication; payment functionality is simulated.

LifeLink | Blood Donor Coordination

Node.js, Express, MongoDB, React Native/Expo | *In development*

- Developing a privacy-conscious mobile platform for healthcare facility requests, consent-based donor availability and location sharing, and private notifications.
- Built backend workflows for donor matching, responses, facility coordination, and administrative controls; not a clinically validated service.

Car Rental System | Collaborative Web Project

HTML, CSS, Git/GitHub | car-rental-system-eosin.vercel.app

- Co-developed a responsive car rental interface with another student, contributing to layouts, styling, and collaborative version-control workflows.

EDUCATION

BSc Computer Science — University of The Gambia, Faraba Banta | 2022–2026

High School Diploma — St. Peter's Senior Secondary School, Lamin | 2019–2022

ADDITIONAL

Interests: Backend engineering, full-stack development, cloud computing, AI and machine learning. | Languages: English, Wolof, French, Mandinka.
